As of 6/14/07, the requirement of soil tests and/or an engineered foundation are no longer required. A foundation plan meeting prescriptive building codes of the SSTD 10-99 must be submitted. A soil load bearing capacity of 1500 psf will be assumed. A map of the region is being developed to identify soil conditions throughout the region. Once this map is complete, a prescriptive design will be furnished for each soil type or characteristic. If you should have any questions, please do not hesitate to contact Michael Wich at SCPDC for more information.
